

Information Technology

The information technology industry represents three main areas of focus in the Pikes Peak region: information technology/software development, data centers/data storage, and cybersecurity.

Information Technology/Software Development

A large and growing number of companies in the Pikes Peak region develop software as their primary business, and several large employers in the region have in-house software development and systems engineering divisions. Products include software for aerospace and defense systems; e-business; financial accounting and inventory control systems; entertainment, games and virtual reality products; and telecommunications services. Because there are a number of defense installations in the area, Colorado Springs is home to one of the most sophisticated communications networks in the nation. This network helps support research firms that require state-of-the-art communications capabilities.

Data Centers/Data Storage

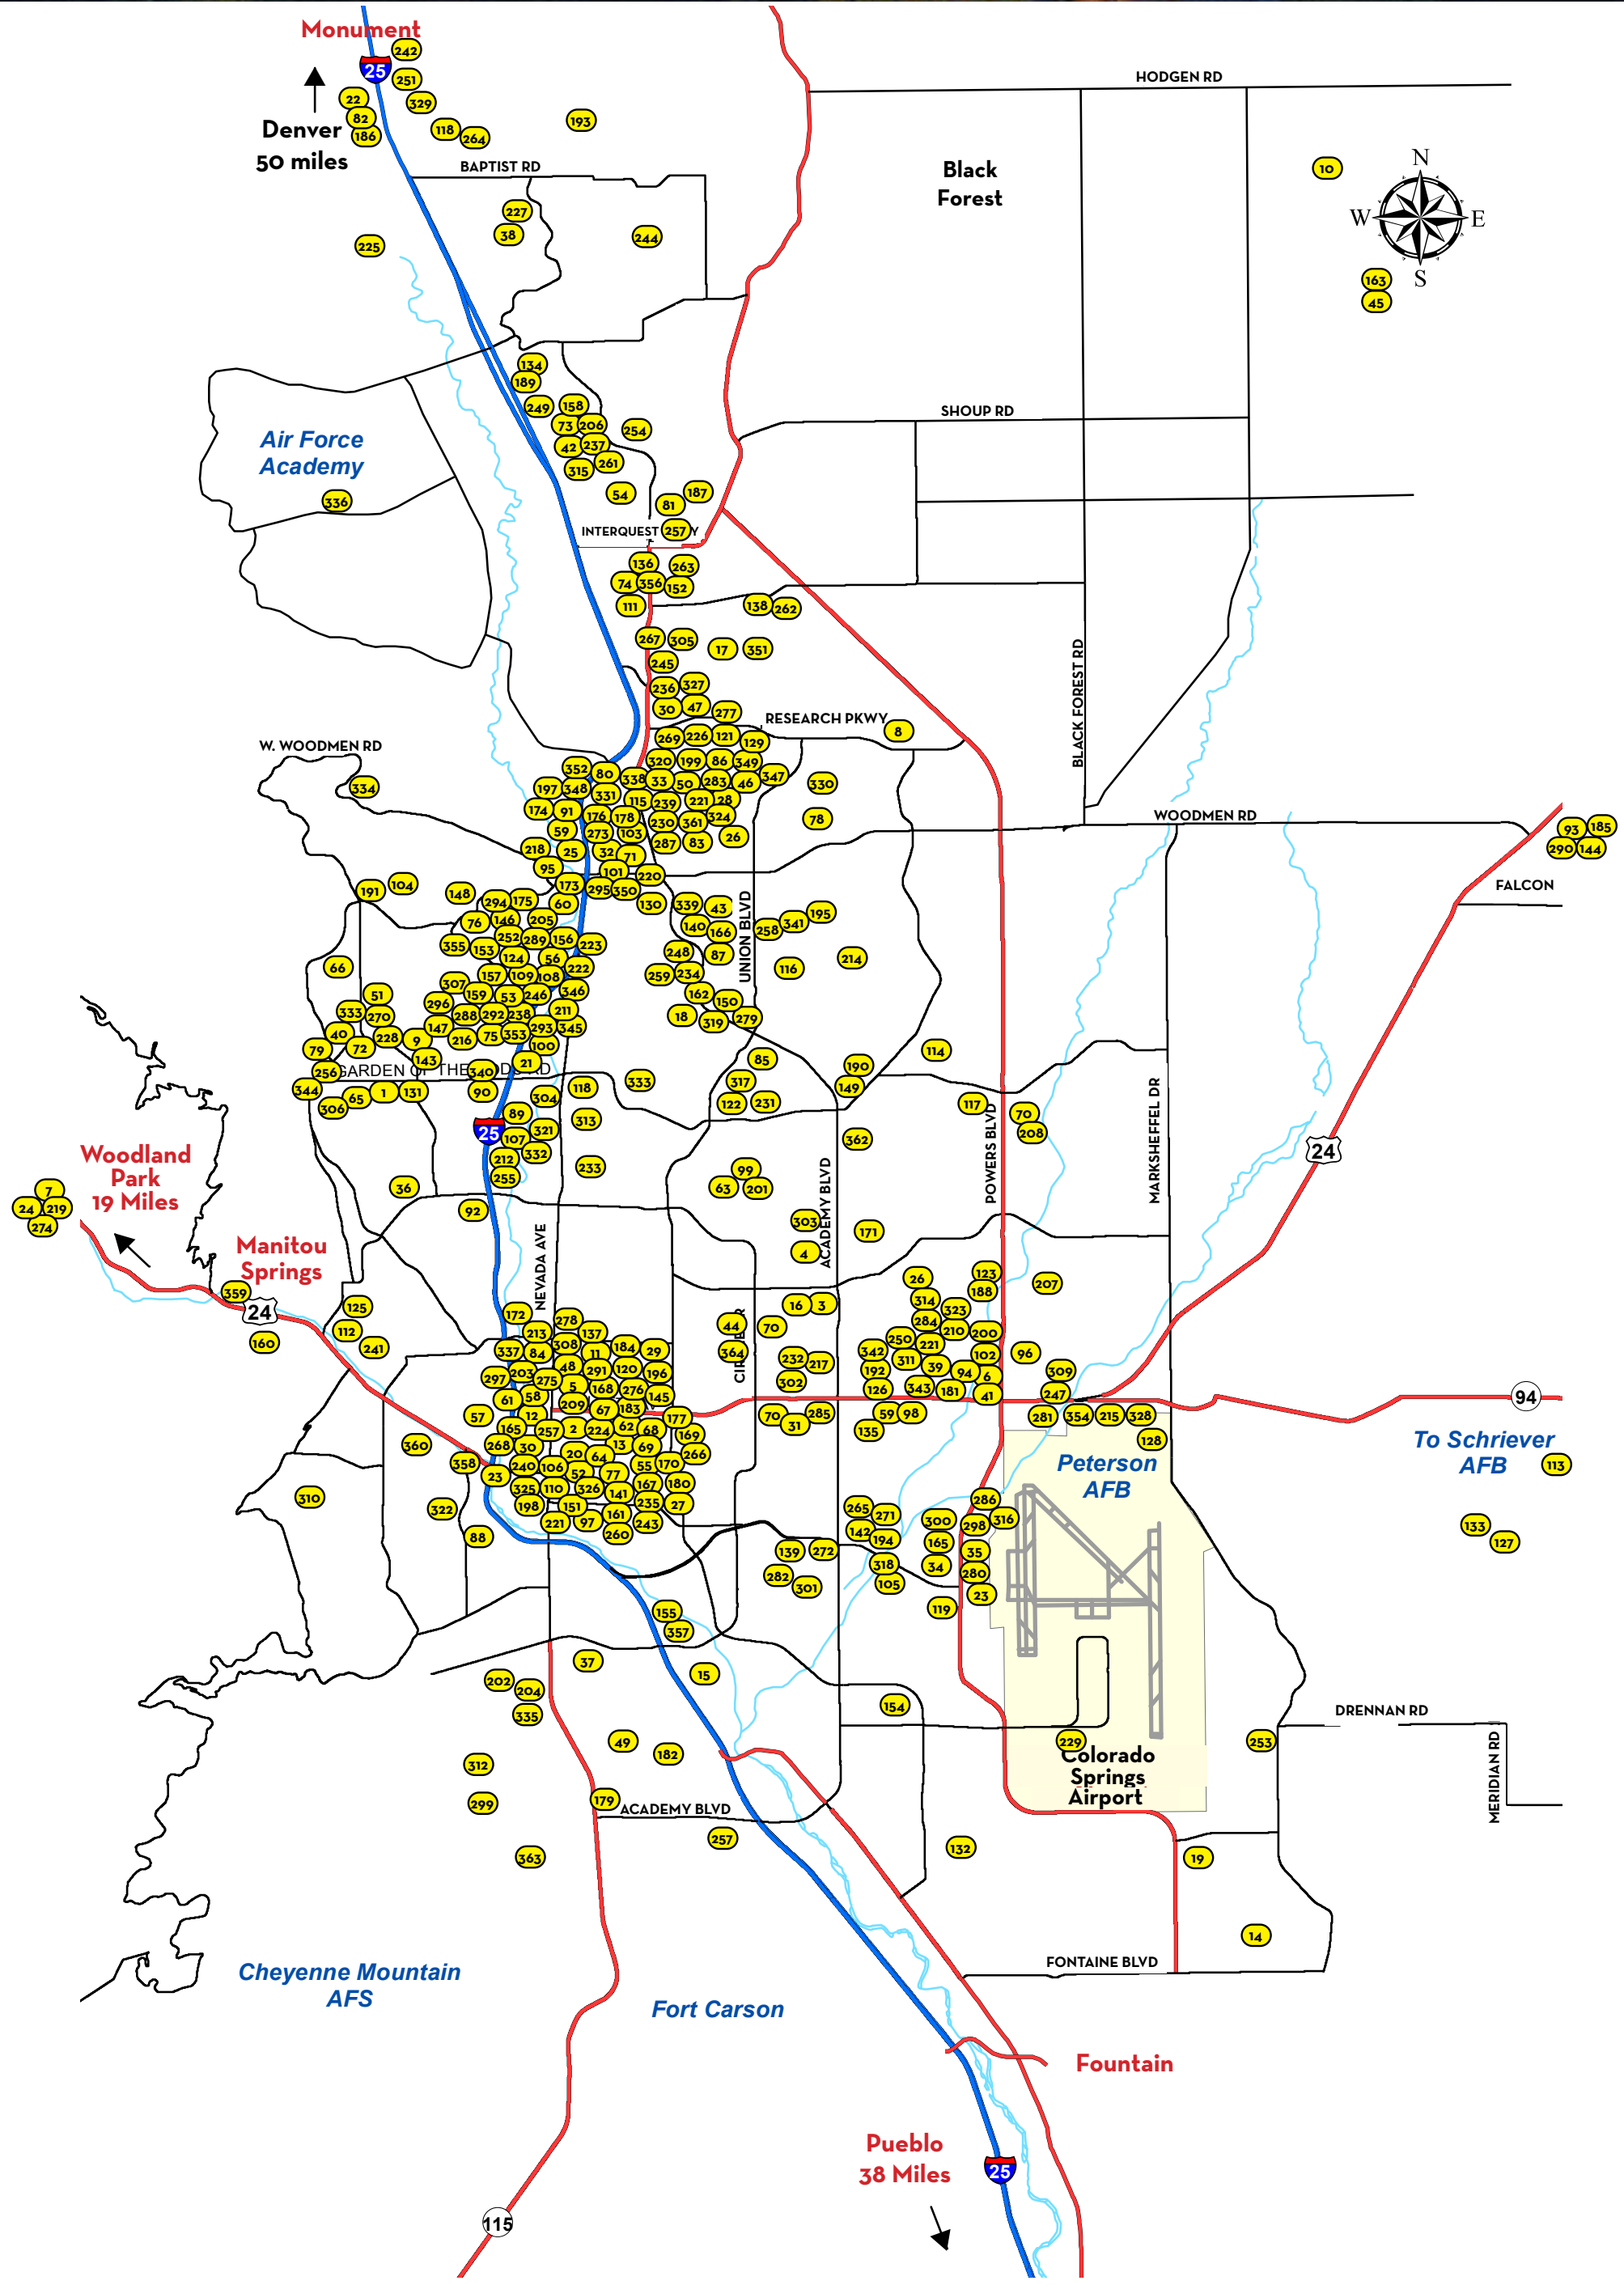

Data storage has become a growing industry in Colorado Springs. Colorado Springs Utilities, a four service municipal utility, offers some of the best power options in the nation to support data center and data storage facilities. With low-cost, high-quality and reliable power, coupled with the region's low risk for natural disasters and moderate climate, it's easy to see why our community has been ranked as one of the top-10 regions in the country for data centers.

Cybersecurity

With a history of pioneering space, a unique concentration of military bases and commands, and a vision to become the cybersecurity capital of the United States, Colorado Springs has attracted many of the world's largest cyber companies while being a catalyst for home-grown cyber businesses. Colorado Springs is also home to the National Cybersecurity Center to provide rapid response, education, R&D and training to businesses and government agencies. Colorado Springs is regularly identified as one of the top-five cities for cybersecurity jobs. Boasting a workforce that includes 20 software developers per 1,000 of population and four NSA accredited Universities of Academic Excellence in Information Assurance, Colorado Springs has the talent to continue to grow its cybersecurity presence.
